TeamBoard UST Projector 0.19

TeamBoard UST Projector 0.19 features one of the shortest throw ratios on the market. This brings the projector close to the projection surface, and that benefits collaborators in three important ways. It dramatically reduces shadows on the interaction surface, it keeps the presenter out of glare, and it means the projector can be on a mobile stand that moves through standard doorways without a whole lot of trouble. Techs love that too, and quickly find a lot of other features designed with them in mind - easy connectivity, low maintenance, filter-free. Every unit includes both US and EU power cables, and an extra-long VGA connection cable.

What About Image Quality?

TeamBoard UST Projector 0.19 features image processing using DLP® Technology from Texas Instruments. DLP Projectors feature superior image quality and incredibly high native contrast ratios. Blacks are really black and whites are really white, making your projections extremely easy to read.

None of this compromises image quality, where the 19er really shows its stuff: Ultra bright, sharp contrast, brilliant color, and high resolution.
